

# STUDENT REPORT

## DETAILS

Name

T G MANIKANTA

Roll Number

TEMPBTech-CSE082

## EXPERIMENT

Title

NUMBER OF COMBINATIONS LEADING TO A PRODUCT

Description

Problem Statement:

You are given an array arr and a product m. Your task is to find the number of possible unique triplets whose product of elements is m.

Input Format:

- The first line contains the integer, n
- The second line contains space separated integers of the array, arr
- The third line contains the product m.

The input will be read from the STDIN by the candidate

Output Format:

The output consists of a single integer, i.e. the count of unique triplets having product m.

The output will be matched to the candidate's output printed on the STDOUT

Example:

Input:

7  
5 3 20 10 1 4 2  
60

Output:

3

Explanation:

Product m:60

Possible triplets for product m: (5,4,3),(20,3,1), (10,3,2)

Source Code:

```
n = int(input())
l = list(map(int, input().split()))
p = int(input())
c = 0

for i in range(0, n):
    for j in range(i + 1, n):
        for k in range(j + 1, n):
            if l[i] * l[j] * l[k] == p:
                c += 1

print(c)
```

The count of unique triplets is 3.
