	The steel to the state calls thinks the street of the	,ch'
, chr. cst. ne	Description of the state of the	ς,
,ch	You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance	MPBTeer
. 0	from the basket and the player's position. The ball is shot N times, successfully. You are given an array A containing the distance of a player from basket for N shots. The index of array represents the position of the player. Score is calculated by	7
ENPRIC	multiplying the position with the distance from the basket.	K.
× .	Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a contiguous subarray of size K from the given array.	3£082 TE
82 <sup>1</sup>	Note:	
cstoal	* A subarray is a contiguous part of array.	Stechic
	* Assume 1 based indexing.	18
"NB Lech,	* The array contains both negative and positive values.	R
"VS.	* Assume the player is standing on a cartesian plane.	387 TEMP
