     Title
SPACE COUNTER TO SPACE 
                                                  You have been given the task of making the content on a social media platform more user-friendly. Your task is to find and return an integer value
                                                  representing the count of the number of spaces in a given string S.
                                                 Input:
                                                  A string S
    SKOBI
                                                  Output:
                                                  Return an integer value representing the count of the number of spaces in a given string S.
                                                  Example:
                                                  Input:
                                                 Hello World Hey
                                                  Output:
                                                 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                82 (EM.
                                         Source Code:
                                                   s=input().split()
